G1 and G2 Species Habitat Management Guidelines

INTRODUCTION

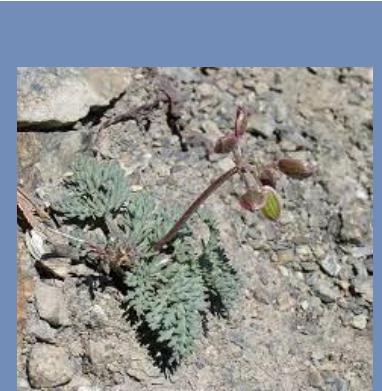

The Sustainable Forestry Initiative® (SFI) [2022 Standards](#) include requirements that promote and conserve Forests with Exceptional Conservation Value (FECV), which includes critically imperiled (G1) and imperiled (G2) species. This fact sheet summarizes the analysis of FECV habitat within this ecoregion and provides habitat management recommendations that would benefit species potentially found here.

HABITAT TYPES

- River/Riparian
- Mixed Conifer Forest
- Rocky Outcropping
- Forest Edge

RIVER/RIPARIAN MANAGEMENT

- Protect known locations
- Maintain well vegetated riparian buffers
- Plant a diversity of both hardwood and conifer trees in the riparian zone
- Retain large diameter trees near streams and rivers
- Buffer wetlands, springs, and headwater areas

Red-fruited lomatium

Spalding's campion

MIXED CONIFER FOREST MANAGEMENT

- Protect known locations
- Retain legacy trees, stumps, and logs
- Retain large diameter trees with cavities or broken tops
- Leave skips and gaps with dense shrub component
- Retain large slash into piles

SPECIAL SITES MANAGEMENT (ROCKY OUTCROPPING)

- Protect known locations
- Buffer special sites

Greenman's lomatium

FOREST EDGE MANAGEMENT

- Protect known locations
- Buffer special sites

All management recommendations assume that operators and land managers are following all applicable BMPs, laws, and regulations.
