

THE SFI CLIMATE SMART FORESTRY INITIATIVE

The SFI Climate Smart Forestry Initiative is advancing the interpretation and implementation of Climate Smart Forestry across the SFI footprint. The SFI CSF Initiative focuses on both enhancing the carbon sink and reducing sources of emissions from the forest sector while achieving co-benefits for biodiversity and wildfire risk reduction.

SMART FORESTRY INITIATIVE

**SFI ADVANCES SUSTAINABILITY THROUGH
FOREST-FOCUSED COLLABORATION**

The binational SFI Climate Smart Forestry Initiative builds on over a decade of collaboration with climate and forest management experts and has foundation and governmental financial support.

SFI is working directly with experts and SFI-certified organizations to reduce net greenhouse gas emissions by identifying, developing, and implementing practices that meet the SFI 2022 Forest Management Standard Climate Smart Forestry Objective while achieving co-benefits for biodiversity and wildfire risk reduction. The Initiative includes granting opportunities to advance on-the-ground implementation of Climate Smart Forestry practices in the United States and Canada.
