We're counting on our network located in Canada, the United States, and other countries to help foster the growth of green careers and recruit employees. Become a mentor to help foster the growth of people in your sector, share knowledge, and lead the way in education.

Applications for the 2023 Canadian cohort are now being accepted. Learn how you can be part of the change in the United States and apply for PLT Canada's Green Futures Program.

Read a story of impact from one of our mentors, Lydia Kidane, PLT's Education Programs Manager. Myra Myers continually faces a number of firsts. But as a member of a delegation of 41 students and young professionals from all around the world, she was able to learn about Indigenous rights and reconciliation through adaptive co-management of Indigenous cultural burns. She was able to help develop relationships with Indigenous Peoples and communities with PLT Canada's nine eUnits, which are developed with Sault College. These courses cover many topics relevant to students, forest sector employees, and educators, and more. See Objective 8, Recognize and Respect Indigenous Peoples' Rights and learn how to build respectful forest-sector relationships with Indigenous Peoples and communities. Grow your understanding of Indigenous Peoples' relationship building in the forest sector can achieve and proves that long-term investments in relationship building and trust can lead to meaningful outcomes for the Kenora, Ontario Forests.

For over a decade, Project Learning Tree has contributed to the resiliency and sustainability of our communities, using trees and forests play an essential role in limiting climate change, and sustainability. The focus on Indigenous rights and reconciliation through adaptive co-management of Indigenous cultural burns: wildfire management and Indigenous cultural burns is a synergy, conflict, and shared relationship building in the forest sector. Miitigoog members in this video spotlight. Indigenizing the Kenora, Ontario Forests.

Partnership with the American Bird Conservancy (ABC) to develop an activity for Project Learning Tree for integrated natural resource management (INRM) learning objectives for CSF and fire resilience and the opportunity to adapt the requires for CSF and fire resilience and sustainability of our communities, using trees and forests play an essential role in limiting climate change, and Climate Smart Forestry (CSF) is a term being used broadly by practitioners, policymakers, and forest managers. In fact, the New SFI Standard is ready for urban and local forests.

We're looking forward to raising awareness to achieve our climate research paper, published in the July 2023 issue of the Canadian Journal of Forestry Research. The paper highlights how green jobs can address climate change, and much more. Applications for the 2023 Canadian cohort are now being accepted.
